

— FOR PEOPLE WHO ARE DONE COPY-PASTING COVER LETTERS

Land more interviews. Skip the busywork.

Job Agent finds the right roles, scores how well each one fits your CV, writes the cover letter and a tailored CV, and tracks every application — so the only thing left for you is the part that matters: deciding to hit Apply.

— THE PROBLEM

Job hunting is a copy-paste loop.

The hard part of applying isn't the decision — it's the hours of admin around it. Same boards, near-identical listings, the same letter rewritten for the tenth time.

- ✗ Re-reading the same requirements in different words
- ✗ Rewriting one cover letter per company, per language
- ✗ Losing track in a spreadsheet that's always out of date

80%

of every application is repetitive admin. Job Agent automates that part — and hands the other 20%, the judgment, back to you.

— MEET YOUR CREW

Four assistants. One job each.

stages + reminders

A real run — this score, these matched skills and these files came out of the actual app.

— WHY IT'S DIFFERENT

Helpful with words — **strict with facts.**

It can't invent skills

A built-in check blocks any skill that isn't in your CV before it reaches a document.

WHAT THE AI WANTS TO HIGHLIGHT

Python

SQL

REST

Kubernetes

✗blocked – Kubernetes isn't in your CV

► Run the check

You keep control

Every document is a draft. Applying is always your own click on the company's site — nothing is ever sent for you.

Private by design

EU storage, per-user isolation, 90-day expiry on old data, and one button that deletes everything.

Live in production

554 automated tests

€0 running cost
