

— UNIVERSITY PROJECT · W-HS “AGENTIC AI” · SOLO BUILD

Four agents do the busywork. You keep the click.

Job Agent finds job listings, scores how well they fit your CV, drafts the application documents, and tracks every application — everything except pressing Apply.

← → navigate · C contents · N speaker notes

Job hunting is a copy-paste loop.

Search the boards, re-read near-identical listings, rewrite the same cover letter, re-order the same CV — and remember who you applied to and when. The work is repetitive; the stakes are not.

- ✗ Re-reading the same requirements in different words
- ✗ Rewriting one cover letter per company, per language
- ✗ Tracking applications in a spreadsheet that goes stale

THE REPETITIVE 80% → AUTOMATED

YOURS

Everything is automated except the one part that matters most — the decision to send.

Three goals shaped every decision

G1 • AUTOMATE

The repetitive 80%

Searching, scoring, drafting and tracking run on their own — while you review the results.

Follow one job through the crew.

Senior Python Software Developer

ACONEXT Engineering GmbH • Stuttgart

cover letter • Word

tailored CV • Word

applied follow-up • in 7 days

Scout

Finds fresh listings & files them
official jobs board

Matcher

Scores fit against your CV
0-100 • skills • gaps

Writer

Drafts letter & tailors CV
EN/DE • Word files

Tracker

Moves it forward, on time
stages + reminders

Real example — this score, these skills and these files came from an actual run of the system.

Helpful with words — strict with facts.

🔗 You decide, always

The app prepares; you approve. Every document is a draft for your review, and applying is always your own click on the company's site.

- ✓ **Never applies on its own** — by design, not by option.
- ✓ **Drafts are editable** — Word files you can change before sending.

🛡️ It can't invent skills

The AI may rephrase and emphasize — it can never claim anything that isn't in your CV. A built-in check blocks made-up skills before they reach a document.

SKILLS IN YOUR CV

Python

SQL

REST APIs

Docker

Git

WHAT THE AI WANTS TO HIGHLIGHT

Python

SQL

REST APIs

Kubernetes

✓ rejected — Kubernetes is not in your CV

▶ Run the check

✅ Your data stays yours

Enough slides — **let's run it.**

- 1 Search & watch it work**
keyword + city → agents report progress live on the page
≈ 45 s
- 2 Read the scores**
0–100 per job — matched skills, gaps, and the reason why
≈ 1 min
- 3 Prepare an application**
one click → cover letter + tailored CV as Word files
≈ 1 min
- 4 Track it to the end**
board moves forward only · follow-up reminders · delete-everything
≈ 1 min

everything runs live — nothing pre-recorded

backup: the crew slide shows this exact flow with real data

The busywork is automated. The decision is still yours.

Hours back, per application

The loop becomes minutes of judgment instead of an evening of admin.

Consistent, honest quality

Every document is grounded in your real CV — in English or German — and can never claim skills you don't have.

Nothing slips through

Stages and follow-ups are enforced by the app, not remembered by a spreadsheet.

255 automated tests

€0 running cost

never applies on its own

your data, deletable any time
